Project Overview
To use waste aluminum alloy and material to make awards bookshelf: Various honors and trophies of the department could not be displayed because there is no place to store them. In order to provide a fixed area for all kinds of honors to be displayed and improve the sense of honor and belonging of the workshop staff. It planned to purchase shelves, but the price of a shelf costs 2400RMB/pcs. After design, measure size and discuss about the plan, the staff decided to make shelves by themselves. The staff named Zhang Rongzhi come out this idea, and with the help of the staff called Zhong Huaren, they picked up the waste aluminum alloy and materials from the warehouse to make the awards bookshelves by themselves, saving the purchase cost of 2,400 RMB/pcs. Benefit calculation: The original purchase cost is 2400 RMB per awards bookshelf, and the production cost is only 661.36 RMB per staff (it costs 30 hours to make a shelf, staff salary is 11.075 RMB per hour *30H*2 person =661.36 yuan). It can save the cost for the company: the purchase cost of 2400 yuan - labor cost 661.36=1738.63 yuan
